

Artwork

PHOTOGRAPHY

Introduction

Nowadays, the high-resolution digitization of artworks not only fulfils a value-preserving function, but also opens the door of endless possibilities. Thanks to unique technical solutions, detailed digital copies can be made of paintings of any size.

Details

Paintings are photographed in location, so moving or transporting them is unnecessary. The final resolution of the digital image always adjusted to the customer's needs, which can reach up to 100 gigapixels. During the photography process, it's very important for us to achieve color-accurate and reflection-free result.

For Museums

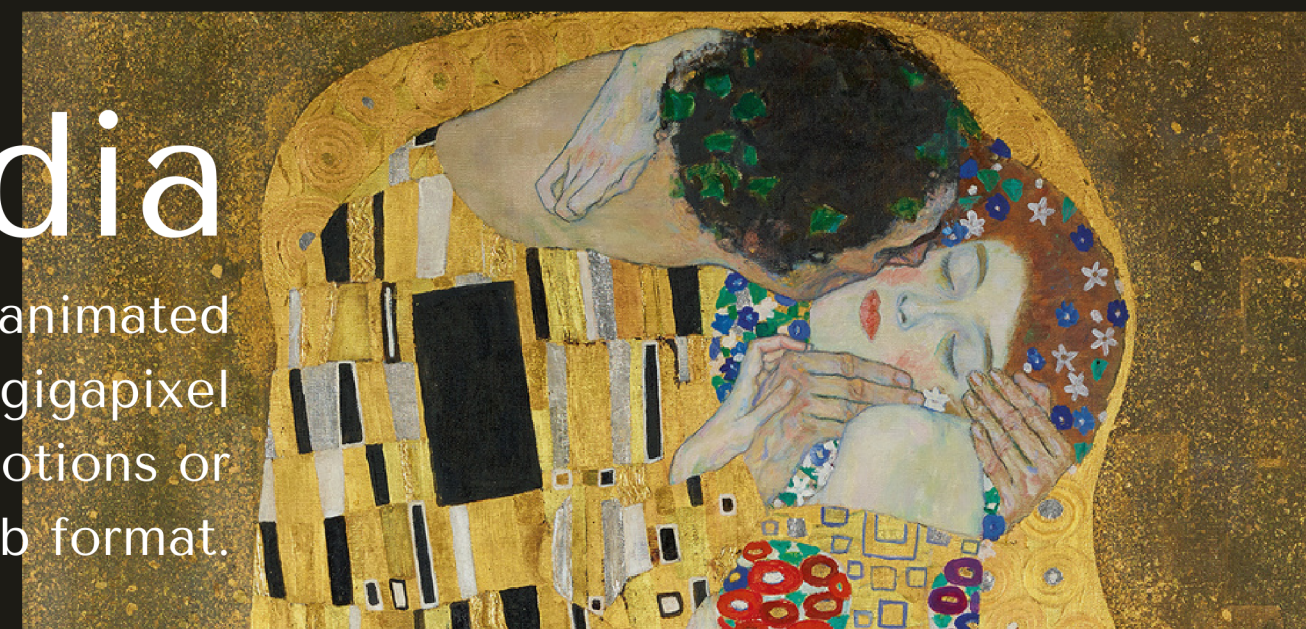

Reproduction

The high-resolution digital copy is suitable for assessing the condition of the painting and capturing a state before restoration. The gigapixel resolution images can be used in a wide range of fields, from posters of various sizes to fine art publications.

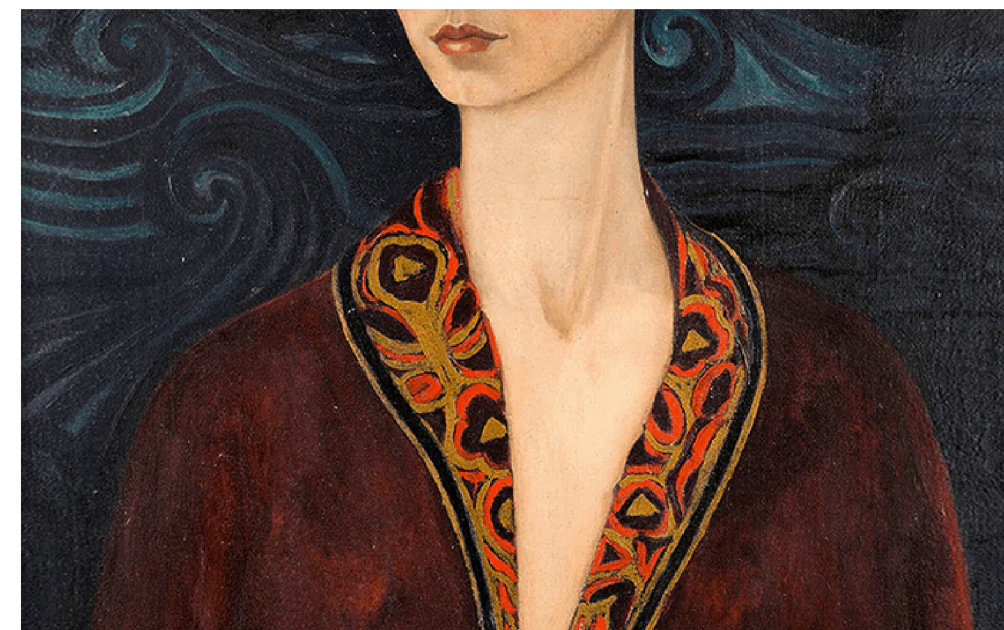

Multimedia

Depending on the details and resolution of the captured image, an animated video of up to 8K quality can be created as well. In addition, gigapixel panoramas of paintings can serve as a basis for interactive promotions or multimedia tutorials in web format.

For Galleries

With the digitalization of the images offered for sale, not only can the list of services be expanded, but thanks to the high resolution, it is also possible to build an exclusive, virtual exhibition.

For Painters

06 of 10

Thanks to digitization in at least 1:1 size, it is possible for the creator to sell copies of the original size in the form of posters or canvas prints. In addition, the digital reproduction allows the artist to advertise the digital version of his work on online auction portals.

High-resolution images of paintings are suitable not only for direct sale, but also for promotional purposes and the creation of unique brand products.

For Collectors

Capturing artworks and transferring them into the digital space, increases the future-proof and safety factor of a given painting. Furthermore, thanks to gigapixel digitization, the detailed photo of the painting can provide sufficient assistance for a remote art inspection or condition assessment.

WWW.PHOTO-REAL.COM

Depending on the size, location and desired resolution of the images, the digitization of each painting is a unique case. In many cases, the properties of the artwork itself determine the image capturing technique. Therefore, with all the necessary information, please request for personalized quotation.
